

Cloud Computing Solutions

SNATEK, always at the forefront of innovative and breakthrough technologies, is now empowering you with cloud power. Introducing SNA CLOUD, a vast array of cloud computing services that are now available from the firm you trust to be one step ahead of your IT needs and wants.

Cloud computing is Internet-based computing whereby shared resources, software and information are provided to computers and other devices on-demand! Both small and medium sized businesses can instantly obtain the benefits of the enormous infrastructure without having to implement and administer it directly. This also permits accessibility to multiple data centers anywhere on the globe. As the need for resources increased, companies can add additional service as and when needed from the cloud computing vendor without having to pay for additional hardware.

SNATEK researched and tested some of the best technologies, investing in state-of-the-art platforms in order to have the expertise and infrastructure necessary to offer you services such as Microsoft Office 365, which brings together cloud versions of Microsoft's most trusted communications and collaborations products for all business sizes. It includes:

✓ **Microsoft Office Professional Plus (Online)**

With Microsoft Office Professional Plus, you get the latest version of the Office applications, seamlessly connected and delivered with cloud services, so you can access your documents, email and calendars from virtually any device! Office Professional Plus includes the new Office Web Apps, online companions to Word, Excel, PowerPoint and OneNote, which lets you review and make light edits to documents directly from your web browser.

✓ **Microsoft Exchange Online**

Give your employees "virtually anywhere" access to email and 25GB mailbox storage—all with improved email security and IT controls.

✓ **Microsoft SharePoint Online**

Let your employees set up websites to share information with others, manage documents and publish reports to help everyone make better decisions.

✓ **Microsoft Lync Online**

Microsoft Lync Online is a next-generation cloud communications service that connects people in new ways, anytime, from anywhere. Lync Online provides intuitive communications capabilities across presence, instant messaging, audio/video calling and a rich online meeting experience including PC-audio, video and web conferencing.

"To the cloud!"

[Microsoft Business Productivity Online Services](#) brings together online versions of Microsoft’s most trusted communication and collaboration products with the security, reliability and control you require including:

- **Microsoft Exchange Online**
- **Microsoft SharePoint Online**
- **Microsoft Office Live Meeting**
 - ✓ Collaborate with colleagues and customers online in real-time for meetings, training sessions and events.
- **Microsoft Office Communications Online**
 - ✓ Offer your organization reliable, security-enhanced instant messaging presence for time-sensitive consults or business-critical decisions
- **Virtualization (VMWARE: vSphere—Microsoft:Hyper-V)**
 - ✓ Improve the efficiency and availability of IT resources and applications through virtualization. Start by eliminating the old “one service, one application” model and run multiple virtual machines on each physical machine. Free your IT admins from spending so much time managing servers rather than innovating. About 70% of a typical IT budget in a non-virtualized datacenter goes towards just maintaining the existing infrastructure, with little left for innovation.
- **Managed Services Provider (MSP)**
 - ✓ As a Managed Services Provider, let SNATEK proactively monitor, manage and control your IT assets and network remotely and automatically. Our web-based platform uses breakthrough technologies such as Labtech, GFIMax, LogMeIn, GoToAssist, etc. Your systems can be monitored and supported seamlessly. You can also automate and eliminate your day-to-day IT hassles by implementing an SNATEK MSP package. Move away from the break-fix approach and be proactive!
- **Application Service Provider (ASP)**
 - ✓ Why invest in infrastructure to support a new application, when you can use ours? With an ASP model, applications are delivered over a secured network to your work environment anywhere in the world, on demand! Cut down on the cost of implementation and upgrades by using our “Software as a Service” (SaaS) model with up-to-date services, 24/7 technical support, physical and electronic security and built-in support for business continuity and flexible working.
- **Colocation (Data Warehousing)**
 - ✓ Having your data off-site, in a safe and secure environment is the best option for a small business that can not afford the costs of a robust infrastructure. Whether you have the hardware or not, colocation helps with better outage protection, better bandwidth, state-of-the-art facilities, the latest updated technologies, physical security and 24/7 support and maintenance.
- **Online Back-up (Mozy, Acronis, Symantec & more)**
 - ✓ Backing up your files has never been so easy, or affordable. A reliable back-up solution can protect your data against viruses, hackers, faulty hardware, theft and natural disasters.

→Controlled IT Costs →Better Budgeting →More Accountability →Peace of Mind
